I vaguely remember the super fast 1600rpm being a tipping point for choosing this one but cant justify as 1400 even 1200 is sufficient and clothes often end up uneven in the spin so anything faster makes a hell of a racket, probably what shakes the pressure sensor loose. The user interface is very complex, with a staggering selection of wash modes, and minimal information on when some of them should be used. Learning what worked for us was trial and error. We only use a few of the available options, but the wash results are very good. The stain removal modes sound good, but take so long that we have never actually used them. The 1600 rpm spin speed works well when it gets going, but if the machine cant balance itself when starting the spin, it

gives up without spinning at all and finishes the cycle leaving the load soaking wet. It does not automatically try spinning on a low speed to reduce the weight of water in items that are heavy when wet, like towels or blankets. After several years of use, it started to develop issues mentioned in other reviews. The bottom of the door rubs on the cabinet, and eventually this wears through the paint and the cabinet rusts. Mould was growing in the door seal and detergent dispenser draw, and the machine was beginning to smell musty. Finally, in May 2018, it developed the F43 error code and stopped working. I called Bosch Home customer service in the country where we now live we bought the machine in Australia and have since moved overseas and they promised to call us back, but never did and actually stopped answering the phone at all. Having read the negative reviews on this site, I sadly admitted defeat, and purchased a new machine. I do not believe that a quality machine of this price should last only 8 years. The replacement arrived and the Bosch was put outside, ready to be dumped. We appreciate the positive feedback about your Bosch WAS32741AU Washing Machine. Well after 6 years only doing about 4 to 5 loads a week the Bosch washing machine stopped working during washing. Im definitely not buying another Bosch product especially when you need to pay top dollar and it doesnt last. I thought when I purchased my Bosch washing machine Ill was getting a product that will last 10 years plus. Only a 2 year warranty on this Bosch product. Well that only tells you how confident they really are. Date Purchased Aug 2011 2 likes Share More Similar opinion. Compare all Steve 3 reviews 4 likes The door handle just broke again, out of warranty now. Theres a design flaw in that a tiny little bit of plastic pushes a metal latch. Ignoring the handle issue, these machines do a terrible job at washing for anything other than a small load. Read more but you need to change this setting everytime you do a wash. I think they took the water saving too far and as a result medium to large loads dont wash well. The machine also leaves water around the door seal and inlet causing mold. The tip here is to put a load through at 90deg every now and again as the high temp kills off the mold. For the thousands of people with broken handles this video is the answer and then ebay for a replacement handle. Date Purchased Jun 2012 1 like Share More Similar opinion. Bosch Home Appliances 1 week ago Hi Emily G., Thank you for your question. We're so sorry to hear you're having issues with your appliance. E29 generally means that no water filling detected by the flow sensor. Some possible reasons for this could be the water tap is closed, the filter or supply is blocked, or that the water pressure is incorrect. You may want to take a look at the above reasons to ensure the matter can't be resolved by some basic trouble shooting. If you don't find a blockage, the water pressure is fine and the tap is open, then you may need to have a technician inspect the unit.
